

ALX PROJECT

Web Infrastructure Design

TASK 3

Definitions and explanations :

For every additional element, why you are adding it ?

We have added one server and one load balancer. Adding a new server has allowed us to separate each component in their own server and yet having one extra server with all the components to serve as a backup if any of the components or servers fails. Each server is monitored and has a firewall. We have also added another load balancer which will handle an increased traffic.
